COMPLIMENTARY FINDINGS REPORT

On-site search relevance

A complimentary, evidence-first read on Industry West's storefront search — and the new Seven Bonde store it is migrating to — with the highest-demand searches to fix, ranked by real Google demand.

Prepared for
Industry West

Prepared by Northvalley Intelligence LLC

A quick, browser-based research read — not a formal audit. No crawling and no load on production. Demand figures are Google Keyword Planner national (US) averages (interest, not addressable revenue).

THE VERDICT

Two engines, opposite flaws: the legacy storefront is broad but fuzzy; the new store is precise but narrow. Both miss attributes and intent.

FIXABLE NOW

24

high-demand searches the catalog can satisfy but search misses.

Summary

THE HEADLINE

The two stores fail in opposite ways. The legacy Industry West storefront casts a wide but fuzzy net; the new Seven Bonde store is precise but narrow. Both miss material-plus-type searches (walnut dining table) and natural-language intent (furnish a living room), and the new store returns nothing for high-demand terms the catalog carries.

INDUSTRY WEST
40%
answered · 14% off-target — broad but fuzzy

SEVEN BONDE (NEW)
26%
answered · 5% off-target — precise but narrow

The single biggest signal: high-demand searches the catalog can satisfy but the engine misses — e.g. **coffee table** (246,000/mo) and **accent chair** (110,000/mo) return solid results on the legacy storefront but **zero** on the new Seven Bonde store. Throughout, **IW** = Industry West, **SB** = Seven Bonde.

How this was measured

- **Real shopper search, no production load.** Each store was evaluated on its live on-site search — the engine shoppers actually use — with bounded, paced reads (about one per second, a plain inspection user-agent, robots respected). **No crawling, no scraping, and no load on production.**
- **Graded relevance.** Every returned product was scored 0–3 for relevance by a local large language model (Meta Llama 3.2 3B, temperature 0, reproducible), summarized as NDCG (0–1).
- **Demand overlay.** Each term is joined to Google Keyword Planner monthly search volume, so failures are ranked by real demand.
- **Scope.** 50 shopper search terms across four query datasets. A quick read, not an exhaustive audit; reliability rises with search-API access and real query logs.

How we can help

COMPLIMENTARY NOW — DEEPER ON REQUEST

This is a complimentary read on a bounded set of queries. We can run the same evidence-first analysis **at scale** against your full on-site query logs and catalog — as a **one-time** deep audit, or on a **recurring schedule** that keeps tabs on search relevancy as your catalog and platform evolve (especially valuable while traffic shifts to the new Seven Bonde store). The deliverable is the same: a reproducible, demand-ranked list of the exact searches to fix.

What works well

Core product-type and material searches are strong on **both** stores — clean, relevant results (relevance about 0.94): ottoman, bar stool, dining chair, lounge chair, counter stool, pouf, leather lounge chair. The engines handle the basics; the gaps are synonyms, attributes, and intent.

Where the money is: high-demand searches that return nothing

Terms with real Google demand where the store search comes back empty or near-empty. **IW** / **SB** show how many products each store returns today.

Search term	Monthly Google searches	IW	SB
coffee table	246,000	7	0
console table	110,000	0	0
accent chair	110,000	6	0
credenza	90,500	0	0
end table	60,500	21	0
sideboard	49,500	0	0
entryway bench	33,100	0	0
reading chair	27,100	0	0

The problems, by category

IW / SB show queries answered out of total, with the average NDCG of the returned results in parentheses (0.00 = nothing returned).

Dataset	IW	SB	Takeaway
Synonym / category	16/27 (0.94)	10/27 (0.94)	Legacy IW returns equivalents fuzzily (accent chair works, with off-type items); the new SB store is strict — misses accent chair, kitchen stool, sofa entirely
Attribute (material+type)	3/12 (0.95)	3/12 (0.99)	Broken on both — walnut/marble/velvet return nothing; only leather combinations resolve
Job-function / intent	1/9 (0.82)	0/9 (0.00)	Natural-language intent is nearly dead on both — only outdoor seating returns anything, and only on the legacy storefront
Head terms	1/2 (1.00)	1/2 (0.76)	dining table works on both; console table misses on both

- **Attributes are broken on both.** "walnut dining table", "oak dining table", "marble coffee table", "velvet chair", "cane dining chair" all return **0** on both stores, despite the catalog stocking marble, oak, walnut, leather and cane.
- **Natural-language intent is dead on both.** "furnish a living room", "dining set for 6", "home office", "small space seating", "reading chair" all return **0**. Shoppers who describe what they want, rather than name a product, hit a wall.
- **The migration swapped one flaw for another.** The legacy storefront is fuzzy (14% off-target); the new store is so strict it returns nothing for common words like "kitchen stool", "accent chair" and "coffee table".

Complimentary quick-win list: fixable search bugs, ranked by demand

Searches the catalog can satisfy but the engine misses — the highest-leverage fixes, workable with us or your current search vendor.

Search term	Monthly searches	IW	SB
buffet†	673,000	0	0

kitchen stool	12,100	5	0
accent table	12,100	10	0
marble side table	9,900	4	0
oak dining table	8,100	0	0
walnut dining table	6,600	0	0
boucle chair	6,600	0	0
restaurant chairs	5,400	0	0
velvet chair	3,600	0	0
cane dining chair	2,900	0	0
woven dining chair	2,400	0	0
black metal stool	320	0	0

† Broad/ambiguous term — national volume is dominated by a non-furniture meaning (e.g. "buffet" = food); treat as indicative only.

Separate opportunity: assortment gaps (not a search problem)

High-demand searches that return nothing because the item is **not stocked** — a merchandising / expansion signal, not a search fix.

Search term	Monthly searches
couch	550,000
sofa	201,000
loveseat	49,500
settee	27,100
writing desk	22,200
home office	18,100
entryway furniture	12,100
dining set for 6	9,900
bar stools for a kitchen island	9,900
small space seating	390

Appendix: all search terms tried

Monthly = Google Keyword Planner avg. monthly searches. # = products returned by each store search; NDCG = average relevance of those results, 0–1 (0.00 = nothing returned).
