CLIENT PRESENTATION DRAFT

Boxercraft Product Discovery Brief

Rendered public-retail, public-wholesale, and search/autocomplete normalization evidence.

Prepared for **Boxercraft Leadership Team** / June 26, 2026

BOTTOM LINE

Exact search and UCLA/Bruins mostly work, but the 36-query Normalization Matrix shows inconsistent recovery.

36

VARIANTS TESTED

ferosh@northvalleyintel.com / +1 (404) 345 0592 / northvalleyintel.com

Product discovery depends too much on exact wording.

Rendered evidence shows useful exact-search coverage and mostly recoverable UCLA/Bruins discovery. The broader normalization pass exposed uneven handling for quarter-zip abbreviations, gender terms, color-product phrases, team aliases, public wholesale SKU variants, and browse routing.

7/8
UCLA/BRUINS SEARCH VARIANTS

0/5
COLOR-PRODUCT AUTOCOMPLETE VARIANTS

10
QUARTER/COLOR BROWSE GAPS

2. Evidence Scope

This is a rendered browser draft, not final client delivery. It uses screenshots, public retail search/autocomplete evidence, a 36-query Normalization Matrix, search/autocomplete-to-browse checks, filter validation, product-page recommendation validation, and public wholesale search checks.

VALIDATED

Search, autocomplete, browse routing, UCLA/Bruins terms, fleece filters, mobile viewport, recommendations, and public wholesale search.

INCOMPLETE

Authenticated wholesale workflows, broader recommendation samples, and full filter persistence.

CONTEXT

UCLA commercial importance is stakeholder context, not verified public proof of client size.

3. Normalization Matrix

QUARTER-ZIP VARIANTS

6 variants tested. Search was relevant for 2/6 and autocomplete for 3/6; zero-search terms included `quarterzip`, `qtr zip`, `qtr-zip`, and `1/4 zip`.

WOMEN'S FLEECE VARIANTS

5 variants tested. Search and autocomplete were each relevant for 3/5; `ladies fleece` and `female fleece` returned 0 search results.

COLOR-PRODUCT TERMS

5 variants tested. Search was relevant for 4/5, but autocomplete was relevant for 0/5, including `maroon quarter zip`, `burgundy quarter zip`, `cardinal quarter zip`, and `red quarter zip`.

WHOLESALE SKU VARIANTS

Public wholesale SKU/product-name variants were relevant for 4/6; punctuation and case behavior was uneven in this run.

4. UCLA / Team Discovery

The UCLA/Bruins priority set is mostly recoverable, but it should be protected because variants still fail. Client-size context remains stakeholder input, not a public factual claim.

7/8
UCLA/BRUINS SEARCH

6/8
UCLA/BRUINS AUTOCOMPLETE

3/6
TEAM ALIAS SEARCH

GAPS

`UCLA quarter zip` dropped in autocomplete. `Bruins apparel`, `team apparel`, `Bulldogs`, and `Georgia Bulldogs` had 0 search results.

5. Search And Autocomplete To Browse

Useful browse destinations exist, but recovery routing is uneven when product matching is imperfect. This is where search, autocomplete, and browse should reinforce each other.

WORKS BETTER

UCLA and broad fan-shop terms usually exposed browse paths in submitted search.

BROWSE GAPS

Quarter-zip and color-product variants had 10 browse-path gaps across search and autocomplete.

FIX PATTERN

Route unsupported or ambiguous terms to relevant collections, pages, fan-shop destinations, and close alternatives.

6. Next Validation Pass

BEFORE EXTERNAL DELIVERY

Use captured screenshots and GEN-004 normalization evidence as current evidence, then validate authenticated wholesale workflows and broaden recommendation/filter sampling.

WHOLESALE

Public wholesale search and SKU variants were tested, but authenticated account, pricing, order, and inventory flows still need authorization.

REPORT PACKAGING

The Northvalley LaTeX report and Beamer deck now reflect browser evidence, full normalization evidence, screenshots, and revised draft scores.

DECISION

Approve a focused discovery cleanup around shared normalization, priority fan-shop intent routing, browse recovery, and distinct related-product recommendations.
